

DNS Lab

1) **Title:** DNS Server Configuration and Name Resolution Lab
using Cisco Packet Tracer

2) **Aim / Objectives :**

To configure and test DNS name resolution using a DNS server.

3) **Devices Used :**

- 1 Switches (2960)
- 1 PC
- 1 Server
- Copper Straight-through Cables

4) **Topology :**

PC0 ----- Switch ----- Server0

5) **IP Addressing Table :**

Device	IP Address	Subnet Mask	DNS Server
PC0	192.168.1.2	255.255.255.0	192.168.1.10
Server0	192.168.1.10	255.255.255.0	-

6) **DNS Configuration :**

Domain Name	IP Address
www.myserver.com	192.168.1.10

7) Procedure / Steps :

- Added one PC, one switch, and one server in Cisco Packet Tracer.
- Connected devices using copper straight-through cables.
- Configured IP addresses for PC and server.
- Enabled DNS service on the server.
- Added DNS record:
-www.myserver.com → 192.168.1.10
- Enabled HTTP service on the server.
- Tested DNS resolution using ping command.

8) Command Used :

ping www.myserver.com

9) Result :

Successful DNS name resolution achieved between PC and Server.

10) Concepts Learned :

- DNS basics
- Domain name resolution
- DNS Server configuration
- Client-Server communication
- Web Server basics
